---

asylum_costs_and_productivity

Breakdown of Asylum costs and productivity

Description

Breakdown of Asylum costs and productivity.

Usage

asylum_costs_and_productivity

Format

A data frame with 12 variables:

Financial Year Financial year

Total Asylum Costs The costs of managing an asylum operations claim include a) costs associated with deciding a case (screening clients, interviews and issuing a decision), b) managing any related appeal, c) the cost of all asylum operations support (S4, S95 & S98) d) detention costs where detention has been used and e) enforcement costs (escorting and assisted voluntary returns). Also included are the costs of department staff and buildings and the proportionate costs of the Home Office building and managerial costs

Asylum WIP (new method) Number of work in progress claims (new method)

Asylum WIP (old method) Number of work in progress claims (old method)

Unit Cost Unit Costs - This is based on the Work in Progress figure. The costs of an asylum operations case will vary considerably dependent on the type of case (single, dependents) as well as barriers to documentation, legal challenges and logistical and practical challenges

Total Conclusion Total conclusions

Average Conclusions Per Month Average conclusions per month

Conclusions Productivity Conclusions producitivity

Total Principal Stages Completed Total principal stages completed

Average Principal Stages Completed Per Month Average principal stages completed per month

Asylum Caseworking Staff Number of asylum caseworking staff

Productivity Productivity of staff ...

inadmissibility_cases_considered

Cases considered under inadmissibility rules

Description

Cases considered under inadmissibility rules, 1 January 2021 - 30 September 2022.

Usage

inadmissibility_cases_considered

Format

A data frame with 5 variables:

Date Date

Quarter Quarter

Year Year

Stage Stage at which the case is being considered

Cases Number of cases ...

Details

Notes: 1. Data on inadmissibility are taken from internal Home Office management information and should be considered provisional. 2. The figures in this table include a small number of cases that entered the system before 1 January 2021, when the strengthened inadmissibility rules came into force. 3. Includes main applicants and dependants. 4. The time period relates to when the action was taken (e.g. the date the notice was issued, the date the inadmissibility decision was served, etc). 5. The data is a count of the outcomes, not a count of individuals; individuals will be counted multiple times in the data. For example, an individual who received a notice of intent and then a decision of inadmissibility will be counted once in the 'notice of intent issued' group and counted again in the 'inadmissibility decision served' group. 6. Data for October to December 2022 was not available at the time of data extraction for this release, due to ongoing work as immigration data transitions to a new case working system. Updated data will be included in a future edition of the Immigration System Statistics release. 7. 'Removals' includes all enforced removals of those entering the inadmissibility process. Where an enforced removal is linked to criminality, these have been excluded as the removal is not on the grounds of inadmissibility. However, there may still be a small number of enforced removals included in the figures which are for reasons other than inadmissibility. 8. Voluntary returns do not attract an inadmissible decision but require the applicant to withdraw their asylum claim. As such, voluntary returns have been excluded as they are not as a result of an inadmissibility decision. For the total number of asylum-related returns of asylum seekers (beyond those in the inadmissibility process), see the Returns summary table Ret_05.

outcomes   *Outcome analysis of asylum applications*

Description

The initial decision and final outcome of all asylum applications raised in a period, by nationality.

Usage

outcomes

Format

A data frame with 26 variables:

Year of application Year of application

Geographical region Geographical region

Nationality Nationality

Applications Applications

Initial decisions Initial decisions

Granted asylum Granted asylum

Granted HP/DL Granted HP/DL

Other grants Other grants

Refused Refused

Applications withdrawn Applications withdrawn

Initial decisions not yet known Initial decisions not yet known

Appeals lodged Appeals lodged

Allowed appeals Allowed appeals

Dismissed appeals Dismissed appeals

Withdrawn appeals Withdrawn appeals

Appeal outcome not yet known Appeal outcome not yet known

Enforced returns Enforced returns

Voluntary returns Voluntary returns

Assisted returns (Subset of Voluntary returns) Assisted returns (Subset of Voluntary returns)

Controlled returns (Subset of Voluntary returns) Controlled returns (Subset of Voluntary returns)

Other verified returns (Subset of Voluntary returns) Other verified returns (Subset of Voluntary returns)

Final outcome: Grants of asylum Final outcome: Grants of asylum

Final outcomes: Grants of HP/DL and other Final outcomes: Grants of HP/DL and other

Final outcomes: Refused asylum or HP or DL or other leave Final outcomes: Refused asylum or HP or DL or other leave

Final outcome: Withdrawn application Final outcome: Withdrawn application

Final outcome: Cases with final outcome not yet known Final outcome: Cases with final outcome not yet known ...

people_in_detention *Number of people in immigration detention*

Description

Number of people in immigration detention at the end of each quarter by nationality, age, sex, current place of detention and length of detention.

Usage

```
people_in_detention
```

Format

A data frame with 10 variables:

Date Date

Year Year

Quarter Quarter

Nationality Nationality

Region Region

Sex Sex

Age Age

Current place of detention Current place of detention

Length of detention Length of detention

People Number of people in detention ...

Source

<https://www.gov.uk/government/statistical-data-sets/returns-and-detention-datasets>

`people_leaving_detention`

Number of occurrences of people leaving detention

Description

Number of occurrences of people leaving detention by nationality, age, sex, reason for leaving detention and length of detention

Usage

`people_leaving_detention`

Format

A data frame with 10 variables:

Date Date

Year Year

Quarter Quarter

Nationality Nationality

Region Region

Sex Sex

Age Age

Reason for leaving detention Reason for leaving detention

Length of detention Length of detention

Leaving Number of people leaving detention ...
